

GLOBAL WARMING - YOU DECIDE!

How would you like to get the scientific evidence on global warming without all of the preaching that too often comes with it?

How would you like to hear about this evidence from a dispassionate professional rather than somebody who is pushing a course of action?

How would you like to ask real questions and get real answers?

Here's your chance!

* * * * *

Q. How much warming are we talking about?

A. From 1906 to 2005 (100 years), the estimated global surface temperature increased by roughly 1.4°F.

Q. What caused it?

A. The International Panel on Climate Change (IPCC) says that it was caused by increased atmospheric carbon dioxide from man's activities.

Q. Are there other possible causes.

A. Yes. We'll talk about some of those possible causes.

Q. Have global temperature changes this big ever happened before?

A. Yes. We'll talk about some of those past occasions.

Q. What should we do about this warming?

A. That's for you to decide. Prof. Tyson is here to give you the evidence and only the evidence. No speculations, no forecasts, no crystal-ball readings.

**Patrick Tyson
Retired Professor of Atmospheric Sciences**

**Community Room, Redding Public Library, 1100 Parkview Avenue
6:00 PM on Thursday, the 2nd of May 2013**
